Download this Windows installer from here: After downloading and installing, run the installer (click on the installer file to run it). It will install the Scala compiler and other necessary files under the Scala folder. You can optionally choose to create a shortcut to it, if you want. Then, create an environment variable named SCALA_HOME with the path to the Scala folder, for example: --- SET SCALA_HOME="C:\Scala" --- Then, open a command prompt in the C:\Scala directory and run scala.bat to start the Scala installation process. You should see the message "Please wait...". After that, open a CMD shell. If everything went correctly, you should have: --- @echo off if [%1]==[] set SCALA_HOME="C:\Scala" if exist "%SCALA_HOME%\bin\scala.bat" set

SCALA_HOME=%SCALA_HOME%\bin scala -version

-- At the end of the scala.bat installation process, you can see the following message: -- Installing Scala from sources... -- For newer installations, use the following command to create scala.bat:

-- scala -version

-- Finally, run scala -version to check the installation. On older installations, use the following command:

-- scala -X -version

-- To check the installation, you can use the scala command, as the previous steps showed. The scala command should return the following:

-- Scala code: Scala version: 1d6a3396d6
